LET'S HAVE A TRY AT ATOM

The point of this document is to try atom, and get used to it.

General tools

Italic and lists

Let's try atom. Why? Because:

- It's new
- It looks pretty good
- It seems fun, although maybe not that convenient
- It helps us render the .md files on GitHub
- I just wanted to create a list so let's stop here

Numbered list

Let's now order the reason with respect to there importance

- 1. It helps us render the .md files
- 2. It looks pretty good
- 3. It seems fun, at least because:
 - I like to code
 - I like the interface
 - It's another way to get better at GitHub
- 4. It's new

Citation

LaoZi said it:

You have to find the waaaay

Usage of backtik for code in sentence (see later)

I have no idea what a backtick is so here it goes: There is a literal <code>backtick(`)</code> here

Real code representation

Let's have a try at the code blocks, in the example of GitHub:

```
$ git pull
$ git add "this is a new file"
$ git status
$ git commit -m "i just added a new file"
$ git push
```

Let's try to confirm it:

```
j'ecris du caca
encore du caca
```

Another method:

```
$ git add "this is a new file"
$ git status
$ git commit -m "i just added a new file"
$ git push
```

Link insertion

Let's try to put a link to GitHub

Image insertion

Oh and here is a picture

Code in the middle of a sentence - Use of (`)

Let's try to see what happens if we put some code in the middle of a sentence:

You can always start with updating your Git file on your PC, with the command \$ git pull, this brings everything non up to date to your PC.

On the usage of \

The tool \ permits you to make everything appear as you write it, even if are involved characters that can be misinterpreted by Git/Atom.

For example: [* + -]

If you want to use (*) for a note, and write [* this_is_the_explanation] Here is the result you have:

• this_is_the_explanation

In order to avoid that, write [* this_is_the_explanation]

Result:

 \ast this_is_the_explanation

| *this_is_the_explanation |
|-------------------------------------------------------------------------------------------------------------------------------------|
| In order to put a date like this [1986. What a great season!], the usage of \ is necessary. like this: [1986\. What a great season] |
| Otherwise, it is identified as a list and will appear as such. |

Without \:

1. What a great season!

Actually, $[*this_is_the_explanation]$ (no space) also works:

With \

1986. What a great season!

.....
